News Desk

Bill Cannings — Software Centre head.

Software case resolved

QUICKSILVA and the Software Centre appear to have resolved their dispute over the latter's Buy'n Try scheme (*Popular Computing Weekly*, March 24-30).

Under the terms of the settlement, Quicksilva is withdrawing its action against the Software Centre. In return, the Software Centre is reducing its buy-back time — the period during which customers can return programs and receive a discount of 80 percent towards subsequent purchases — from six months to one month.

The exact terms of the settlement will be proposed to the court on April 13, when solicitors acting for both parties will request an *order by*

CTA stands against libraries

TWENTY-EIGHT micro manufacturers, retailers and software companies attended the second meeting of the Computer Trade Association, held at the Spider's Web Motel, Watford, last week.

The main order of business was the vexed question of software libraries. John Everett, of Lutterworth Software, believed that libraries would be better controlled from within the CTA, where they would be subject to its constitution.

Nick Alexander, of Virgin Games, was among those who felt that, even if the problem of home duplicating could be solved, libraries would still be a bad thing.

"Because rental took off in the video market, dealers got involved in such cut-throat competition that they didn't have enough revenue to plough back to buy new releases — the same thing could happen with games."

A suggestion that games

How to submit articles
Articles which are submitted for publication should not be more than 3,000 words long. The articles, and any accompanying programs, should be original. It is breaking the law of copyright to copy programs out of other magazines and submit them here — so please do not be tempted.

All submissions should be typed and a double space should be left between each line. Please leave wide margins.

Programs should, whenever possible, be computer printed.

We cannot guarantee to return every submitted article or program, so please keep a copy. If you want to have your program returned you must include a stamped, addressed envelope.

Accuracy
Popular Computing Weekly cannot accept any responsibility for any errors in programs we publish, although we will always try our best to make sure programs work.

Editorial

Micro whizz-kids are all the rage at the moment. Derek Bartle, the 17-year-old marketing manager for Mikrogen, and Eugene Evans, the 16-year-old Imagine programmer, have appeared in newspapers up and down the country in the last few weeks.

The reason for this sudden interest in 'computer prodigies' is quite simple. Micro illiterates (ie the man in the street) have been amazed to discover that kids half their age can earn enormous amounts of money for writing and distributing games.

To the uninitiated, the very idea that games could be worth real money is something of a surprise. This surprise is compounded still further when they discover that the game programmer is 'just 16'.

However, it would be more surprising if the game programmer turned out to be 66 rather than 16. Young people, on the whole, tend to absorb new ideas better than their elders. Projects which might be dismissed as impossible by most adults are merely challenges to minds unfettered by the constrictions of age.

The present flock of whizz-kids also seem to be remarkably level-headed. There have been no cries of 'Spend, spend, spend' which have accompanied so many pools winners.

Youth is not a crime or a disease, it is a condition through which all of us must pass.

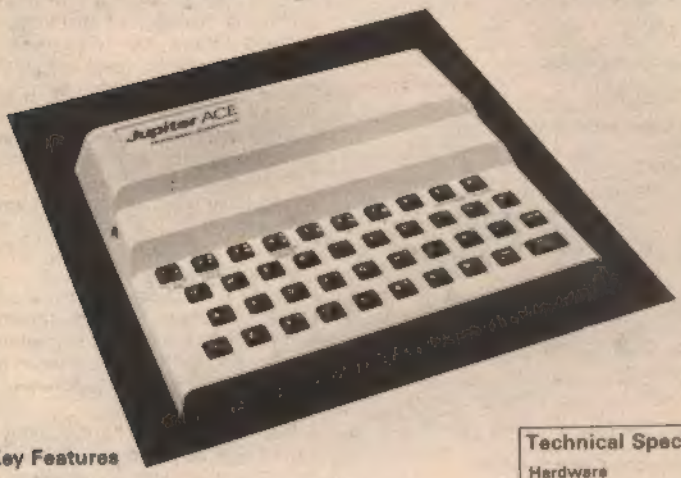
Probably the fastest microcomputer in the universe

the **JUPITER ACE** only £89.95.



For £89.95 you receive your Jupiter Ace, a mains adaptor, the leads needed to connect to most cassette recorders and T.V.s (colour or black and white), a software catalogue and a manual.

The manual is a complete introduction to the world of personal computing and a course in FORTH programming on the Ace.

Even if you are a complete newcomer to computers, the manual will guide you step by step from first principles to confident programming.

Key Features

- Revolutionary microcomputer language FORTH.
- Full-size moving-key keyboard.
- User-defined high-resolution graphics.
- Programmable sound generator.
- Floating point arithmetic.
- Fast cassette interface.
- Upper and lower case ascii character set.
- 24 x 32 character flicker-free display.

The Jupiter Ace uses FORTH

The Ace is set apart from all other personal computers on the market by its use of a revolutionary language called 'FORTH'. Some computer languages are easy for humans to understand, others are easy for computers; FORTH is most unusual in being both. Its underlying principles are so simple that it takes even a newcomer to computers only a few minutes to learn how to do calculations on the Ace, yet the very same principles are powerful enough to allow you to invent your own extensions to the language itself.

At the same time, the memory-saving coded form used to store your programs inside the Ace allows it to obey them very fast — typically in less than a tenth of the time it would take to do the same thing using a different language. Amongst other things, this makes the Ace ideal for games.

FORTH's unique combination of speed, versatility and ease of programming has already made it a prime choice for professional applications as diverse as pub games and radio telescopes, and gained it an enthusiastic national user group. Now the Jupiter Ace can bring this addictive language into your own home.

Designed by Jupiter Cantab

Leading computer Designers Richard Altwasser and Steven Vickers have a reputation for pushing technology forwards. After playing the major role in creating the ZX Spectrum they formed Jupiter Cantab to develop their latest brainchild the Jupiter Ace.

Technical Specification

Hardware

Processor/Memory
Z80A running at 3.25 MHz. 8K bytes ROM 3K bytes RAM.

Input
40 moving-key keyboard with auto-repeat on every key.

Output
Memory-mapped 32 x character display with high resolution user graphics. Output to drive normal UHF TV set on channel 36.

Sound
Provided by internal loudspeaker.

Cassette
Load Save & Verify at 1500 baud, separate data storage.

Software. FORTH

Data Structures
Integer, Floating point and String data may be held as constants, variables or arrays with multiple dimensions and mixed data types.

Control Stuctures
IF-THEN-ELSE, DO-LOOP, BEGIN-WHILE-REPEAT, BEGIN-UNTIL, all may be mixed and nested to any depth.

Operators
Mathematical +, —, X, ÷.
Logical AND, OR, NOT, XOR.
Comparison <, >, =.

Program Editing
FORTH words may be listed, edited and redefined. Comments are preserved when words are compiled.

Order Form

The **Jupiter Ace** is available only by mail order. Please allow up to 28 days for delivery.
Send cheque or postal order with the form to:—

Software Centre

Continued from page 1

consent. Both Quicksilva and the Software Centre are waiving all claims and each party will bear its own legal costs.

This outcome appears to favour the Software Centre, as a reduction in the buy-back time is unlikely to have any detrimental effect on its operation.

But, other software houses are still looking closely at the Software Centre's Buy'n Try scheme. A Sinclair spokesman commented: "It is now clear that Sinclair Research will not be taking any legal action against the Software Centre.

"The practical way to stop their actions is to stop them from getting any product — and that is what we are now turning our attention to."

● The Software Centre is planning to open two more stores, one in Ilford and one in Leicester.

Texas lands the big one!

TEXAS Instruments has won an order worth more than £2.7m to supply Ram chips for the Oric 1 microcomputer.

The order, placed by ITL Kathmill, who acts as Oric's procurement and manufacturing agent, is for the TI TMS 4164 64K Dynamic Ram semiconductor chips, used in the 48K version of the Oric machine.

CTA

Continued from page 1

might be leased rather than sold was rejected as impracticable by Quicksilva's Nick Lambert. Chris Lawson, of Salamander, said that the only legal control the software houses had was over the first party sale — what subsequently happened to their cassettes could not legally be written into the terms of the contract of sale.

The most unequivocal stand was taken by Dave Patterson, of Silversoft. He suggested that a cartel of software houses was required.

A motion was finally agreed by 22 of those present that "The CTA is opposed to any form of hiring or lending of tapes, discs or cassettes by direct or indirect means without the authority of the author of the program or his or her agents and publishers."

Micro's in the high street!

AT LAST there are signs that the Micro-Professor MPF-II computer is making its way to the shops.

The 64K machine, which is compatible with Apple software, has been on sale in the US for over two years, but has only recently acquired a British distributor.

Sirtel (UK) entered into negotiations with the machine's Taiwan-based manufacturer, Multitech, in October last year. The result was an exclusive agreement to import the computer and first deliveries arrived in late January.

Now the machine has been adopted by the Spectrum retail chain and will be available through its 120 stores from April.

The 6502-based Micro-Professor will sell for £269 including VAT. It has a calculator-type keyboard, although a separate full-size keyboard is available as an option.

The machine has a 24 × 40 character display format with six colours. It has a low-resolution graphics mode of 40 × 48 pixels and a high-resolution mode of 280 × 192 pixels. Interfaces include video output, Centronics interface and joystick port. Disc drives are available but are not compatible with Apple disc software.

Prices include: full-size keyboard, £36.25; printer, £185.74; floppy-disc drive, £296.85; joystick, £14.95.

UK game hits No 1 spot in US charts

GRID Runner is the top selling Vic20 game in America.

The game, written by Jeff Minter, of UK Software house Llamesoft, began its climb to the top of the US charts at the end of February. Now, over 15,000 copies have been sold — 8,000 of those in the last two months. *Grid Runner* is only available on Rom cartridge in the US, priced at just over £23, although a cassette version is available in the UK.

The cartridge version of the game is soon to become available in the UK, and the Rom version is expected to sell for around £20 in Britain.

Jeff Minter has also written a version of *Grid Runner* for the Commodore 64 machines together with two new games: *Attack of the Mutant Camels* (£8.50) — and *Rox* (£4.95).

Jeff is also working on a follow-up to *Grid Runner* — to be called *Matrix*. This should be available in mid-May for both the Vic20 and Commodore 64, priced at £8.50.

Twenty-year-old Jeff Minter founded the Llamasoft venture less than 18 months ago.

Jeff Minter of Llamasoft.

Special rates for BBC

MEMBERS of two BBC microcomputer user groups can now obtain a Series 1.2 operating system Rom at a special discount price.

Since the BBC machine was first launched, the operating system has appeared in both Eprom and Rom in a variety of forms — 0-1, 1.0, 1.1 and now the 1.2 Rom.

Those with Eproms, or those wishing to buy discs or run Econet, can up-grade free of charge. However, the rest must take their machine to an Acorn dealer and pay £11.50.

Now, the two main BBC user groups — Beebug and Laserbug — have negotiated special rates for their members — £5.85 and £5.50 respectively. The Rom swap has to be undertaken by the user, but full instructions are supplied by Acorn.

If the machine then fails to perform, a BBC dealer will then sort out the problem for an additional charge.

The £6 Rom discount effectively off-sets the six-month membership subscription for either of the two groups — £5.50 for Beebug and £6 for Laserbug.

Timex cuts cost of TS1000 as sales drop

AS expected, Timex in the US has cut the cost of the TS1000 machine in an attempt to revive flagging sales.

The price for the American ZX81 equivalent drops to £48 and the present £10 rebate offer will continue to the end of April. This means that for the next month the TS1000 will sell for only £38.

"We are committed to remaining the price/value leader in personal computers," said Daniel Ross, Vice President of Timex Computer Corporation.

Ever since the TS2000 machine — the Spectrum equivalent — was announced by Timex in January, sales of the TS1000 have slumped. This, coupled with a delay in the launch of the TS2000, has been causing Timex anxiety.

The limited special offer price of £38 is intended to revive sales of the TS1000 and provide encouragement to dealers. This point was emphasised by Daniel Ross: "No personal computer manufacturer offers more to the retailer in terms of profit potential."

SPECTRUM AND ZX81 HARDWARE

PANDA

The famous Panda Expandable Ram Pack. Massive 16K add-on memory which can easily be expanded to 32K with an optional plug-in module. Supplied in rugged no-wobble design, rugged, injection moulded case, contoured to fit the ZX81 snuggly. Compatible with other add-ons (printer etc). LED on/off indicator. No additional power needed just plug in an go. British designed and made from top quality components throughout, guaranteed 12 months.

ONLY £19.95

EXPANSION MODULE

The 16K 'Panda' is easily expanded from 16K to 32K by adding this expansion module as and when you need it.

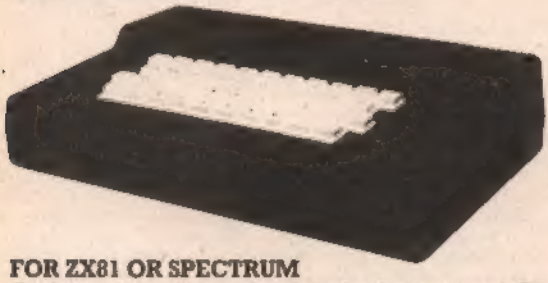
ONLY £14.50

GIANT PANDA

Giant Panda the two together. Buy the Panda and the Expansion Module at the same time for a gigantic 32K bytes and save.

Complete at a special price of **ONLY £34.50**

PROFESSIONAL CASED KEYBOARD TYPE FD42



FOR ZX81 OR SPECTRUM

This famous, best selling product immediately converts your ZX Computer into a sturdy, attractive and professional unit, with full size typewriter keyboard. A tough plastic case encloses the keyboard, PCB and power supply. It has 42 keys including all the ZX81/Spectrum graphic characters printed on them. The full travel key switches have gold plated contacts and guaranteed life of 10^7 operations. It's so easy to install! You simply unscrew the ZX PCB from its case, screw it to the FD case, and plug in the keyboard. No soldering or technical knowledge required.

ONLY £29·00

TYPE FD5 FOR ZX81 OR SPECTRUM

Our new advanced keyboard has the same, fine specifications as the FD42 system, but with a new re-designed case, space bar and double-sized shift and enter keys. A must for the discerning ZX81 or Spectrum user.

ONLY £39·95

ZX KLIK – KEYBOARD

If, like many ZX81 users, you are fed up with the dead feel of the touch sensitive keypad then consider the well tried 'Klik-Keyboard'. This is a simply fitted genuine push button keyboard which has been designed as an exact replacement for, and is no larger than, the existing keypad. ■ Fits on to the ZX81. ■ Full 40 keys plus one spare for any purpose. ■ No soldering – just plug in. ■ No trailing wires. ■ Clear permanent two colour legends. ■ Positive feel and sound as data is entered. ■ Speeds up programming enormously and reduces errors. ■ Fitting service offered £2·00 extra (remember to send your ZX81).

THE SOUND EXPANDER

A superb economical addition to your ZX Spectrum. Clear, dynamic sound effects will really enhance your enjoyment of the new exciting programs available for the Spectrum. Our new sound amplifier comes complete with leads, volume control and built-in loudspeaker. Simply plug into the mic input, it fits neatly on to the back of the Spectrum.

ONLY £7·50

STOP PRESS

16K Spectrum owners – upgrade to 48K with a Spectrum Upgrade Pack complete with full instructions. No soldering.

ONLY £35·00

COMING SOON!

Our range of products is constantly under development and review. We have selected products from leading manufacturers in the UK and believe these represent the best value and quality combination on the market today.

PRODUCTS ARE STOCKED AND USUALLY DESPATCHED WITHIN 10 DAYS.

Bugged Spectrum

There have been a number of letters published over the last few months about so-called 'bugs' in the Spectrum Rom, so I was glad to see Ian Beardsmore put the record straight *(Peek & Poke*, March 10).

However, there *is* one bug in the Basic that caused me a great deal of difficulty until I could isolate it. It occurs when concatenating character strings — eg, when building up a message to be handled by a sub-routine. Try the following program:

```
10 PRINT "The value is " + STR$ 2
RUN
```

This will appear on the screen as: *The value is 2*. Now insert a decimal in front of the figure 2, ie:X

```
10 PRINT "The value is " + STR$ .2
RUN
```

This will *not* print the text — it is completely lost, and the only printed result is 0.2! If you wish to see the full effect of this bug, try running the following program:

```
10 FOR x = -1.1 TO 1.1 STEP .1: PRINT "The value is " + STR$ x: NEXT x
```

I wrote to Sinclair in July 1982 about this bug, but did not receive a reply.

A recent article by Nick Wilson *(Popular Computing Weekly*, January 20-26) showed some of the potential of the *Draw* command, but the ability of the machine to draw fine squares, triangles, stars, etc, has perhaps not been appreciated. The following one-line program will allow a variety of sharp, perfectly formed shapes to be generated and held on the screen for a few seconds. The program looks totally incapable of doing this, but again you will be surprised at the results:

```
10 INPUT "Top no. "; T ;" Bottom no. "; b : PLOT 128,16: DRAW 1/16, 0, 504 * PI * t / b + 1/1024 : GLS : GOTO 10
```

Run the program and use integers for *t* and *b*, with the top number as a Prime and less than the bottom number. Some useful values are *t=1, b=4* (square); *t=1, b=3* (triangle); *t=31, b=63; t=3, b=7* (seven pointed star).

The program uses the method by which the Spectrum draws arcs — it divides the arc into a large (504) number of points and then draws straight lines from one point to the next. If the points happen to be exactly 60 degrees apart, for example, a triangle will result.

Adventure fetish

Congratulations for producing such a superb magazine which gives full value for us many Vic20 owners.

Apart from the splendid variety of program listings, I am particularly indebted to Mike Grace for his humorous and well-balanced reviews of software for the Vic. Mike's style is highly entertaining and his apparent fetish for adventures is equal to my own attraction to these intricate puzzles. Thus, it is with great expectation that I await the release of Scott Adams' next seven adventures.

Continue with the good work. *Popular Computing Weekly* and do not drop Mike Grace for anything!

James Winn

It's in the stars

The opinion of your correspondent T P Byatt on astrology and astrological programs (Undeserving Astrologers — *Popular Computing Weekly*, March 10-16) reveals great prejudice and makes suspect the very intelligence he claims insulted.

While the traditional dogma of astrology is far from proven, a great deal of modern scientific research in a wide variety of fields has yielded evidence which supports the basic astrological theory. Many reputable scientists are currently engaged in work which is astrological in nature. A computer magazine is perhaps not the place to catalogue such research, though I can supply the information should your correspondent so request.

For my part, I would be glad to know the research, undertaken by Mr Byatt, upon which he bases his dismissive attitude. Perhaps it would be apt to quote the reported rebuke made by Sir Isaac Newton when criticised for his involvement with astrology: "Sir, I have studied the subject. You have not." But perhaps Mr Byatt thinks Newton undeserving of the technology he fathered.

Compiling copyright

The occasions on which I have been drawn to write to a magazine are so few that you are in a minority of one. There is, however, a very good reason why I feel compelled to respond now.

Having had 14 years experience in the computer industry, I watch bemused as various views and attitudes are portrayed which range from innovative to ridiculous. One fact that is inescapable is that the whole sphere of microcomputers for home use is still very amateurish.

It has taken us a long time in the computer industry to establish standards and protocols and it is disappointing to see the same mistakes being made with micros today, as were made with mainframe computers 20 years ago. My particular concern on this occasion is the question of copyright and there are several points I would like to make.

I would like to reply to the comments regarding compilers and whether the use of a compiler entitles its author to copyright of the final program. I can only compare this suggestion to one that said that all paintings of Picasso really belonged to the paint manufacturers, or that works of Shakespeare belonged to a translator who published a version in a foreign language. The point being that a compiler is a tool, and no more, used to convert a high level language to machine code. I am sure the thought that it gave the author the right of copyright would amuse the main computer manufacturers, eg, IBM, Honeywell, ICL, etc, who have been providing compilers to every computer installation throughout the world for many years.

The fact that the individual who made this suggestion seemed unsure about the difference between an assembler and a compiler adds to the argument of a lack of professionalism. The difference related by Miss Counsell between the two is that compilers perform a 'literal' translation based on the high level language commands (eg, will convert a print command to a sequence of machine code instructions). An assembler, on the other hand, allows the programmer to work at a lower level and therefore he can use more efficient code.

Disappearing 2650

With reference to *Peek & Poke*, March 10-16, "Gone fishing": The Teleng computer was taken over by Rowtron Marketing, 200 High Street, Boston Spa, West Yorks LS23 6DR. Tel: 0937 845400. Fourteen cartridges were available a year ago.

This computer used the Mullard/Philips 2650A microprocessor — this chip has also been used in an "Elektor" magazine games computer, and I believe, in the current Philips games computer. The cartridges use the Mullard 2616 16K Rom, each storing many games or variations of one game.

My family has three of these machines, which were early in the market (1979) and deserved to survive. I believe that Rowtron were to continue the development by introduction of the planned Rom so that the machine could beome a "proper" home computer.

I have a few spare cartridges if Mr Thomas is interested and think that there may be quite a few of your readers who have machines to dispose of for spares, etc. Maybe the staff of *Popular Computing Weekly* can shed light on why the 2650 does not appear in any of the popular micros.

Death wall

A new game for the Dragon by Mark Perry

Death Wall is a game for one player on the Dragon 32. Using the arrow keys, the player controls a line which he must prevent from hitting the walls of the screen, or the line controlled by the computer. The player must trap the computer's line, so that it has no choice but to hit a wall or a line. This is not so easy as it sounds!

The program uses sound, high-resolution graphics and colour, though the game is played in *Pmode 4* so colour is only used in the opening page. The game also features on-screen display of the player's score and the computer's score.

When Run, there will be a short delay before the opening page of graphics. Full instructions are included in the program.

Notes

10	Defines string for drawing the game.
90-110	Defines strings for drawing numbers.
120-210	Draws opening graphics page.
220-270	Prints instructions.
280	Speeds processor up.
290	Waits for 'ENTER' to be pressed.
310-400	Sets up game screen.
410	Clears game screen.
430-610	Draws scores in correct places.
620-840	Section controlling play.
680-760	END routine.
660	Puts random gate on screen.
770-800	Checks for keyboard entry.
850-970	Subroutine controlling movement of computer's line.

At last . . .
Exciting AND Challenging Computer Games for Two Players.

CONFLICT A total war for two players involving both the machinery (armies, missiles, warships) and finance (stock market, oil, piracy) of conflict. *"I enjoyed this strategy game" (Computer and Video Games).*

GALAXY CONFLICT Raise a fleet of Battle Eoncruisers then move from bridge to bridge taking full control and responsibility in this battle for the heavens. Born galactic rulers will do well. *"Galaxy battle sets new trend" (Sinclair User).*

Games include — ZX81 (16K) and Spectrum (48K) programs on ONE cassette. Full size professionally printed board. Counters and markers. Two pads disposable maps (Conflict only). Comprehensive instructions/rules.

✱Professionally packaged in high quality attractive box.

✱Each game only £11.95 inc. Postage or £22 for both games.

✱Available from W. H. Smith, Buffer, Games Centres and many other retail outlets or mail order from:

ADVENTURES WITH OVER 4000 LOCATIONS

SPACE ADVENTURE
ROLE PLAYING ADVENTURE
SINGLE PLAYER ADVENTURE

Over 4000 locations on one adventure cannot be done on one tape! The first tape contains the graphics, the instructions, the preparation for travel and the first adventure. As soon as this first adventure is finished you can order the next part. Please note that every part gives you at least two if not four different exits.
You can stop the game any time you like. It is, however, not possible to skip parts because data are recorded and you need these to continue. There is always an option to continue when you have found an exit, thus allowing you to find all the exits in any one module.
TYRANT OF GRAHIM: an adventure in outer space. Try and find your way to the planet Shrahaim. The approaches are heavily guarded but if you can get through you will find eternal life and the conquest of the universe is yours. Maybe (but we doubt it) you will find the way to another universe, but only if you enter the right black hole . . .
TREASURES OF MOSHT: a single player adventure in the most fabulous country ever put on computer. Try and stay alive in a place where everything seems to go against you . . .
TRAVELS IN RASHAN: a role playing adventure situated on earth before the cataclysms which happened before the Precambrium era, some 600 million years ago. Travel through this ancient civilisation with its uncanny laws, stay alive and gather treasure. Then try and get back to your own time . . .

EACH ADVENTURE, Module 1, **£4.50**
Each further module also **£4.50**
Please add 50p per order for p&p

Available now for Spectrum 16K/48K and Atari 400/800
Available in May for Dragon and Oric-1

Down by the sea . . .

***David Kelly** talks to the Salamander partnership about their operation.*

Salamander Software is a partnership of ex-Sussex University students — based almost a pebble's throw from the sea in Brighton.

Formed last August and operating as a co-operative ■ equal partners, Salamander has already become an important independent software house for Dragon 32 programs.

The original idea for the group seems to have belonged to Paul Kuczora. After leaving college and treading water through a variety of tedious jobs, Paul ended up flogging power supplies to IBM. "A change was called for!" he observes.

"My original intention was ■ do BBC software. A friend had a machine and in June last year I wrote some material for it. We were starting to get something together when he left to concentrate on business software for the micro."

So, Paul was back ■ square one. At least, he was until Pete Neale got involved. Pete had come over to Britain from Texas in 1974 to study at Sussex University and had stayed — ending up as a systems programmer on IBM main-frames.

"I didn't know anything about micro-computers at all — being a main-frame person," he explains. "I wanted to buy one, though, to run some utility programs to help with playing *Dungeons and Dragons*. In August I went in to The Gamer in Brighton and I bumped into Paul."

"I saw him through the shop window — looking as though he was going to buy a machine," says Paul, "so I went in to make sure he bought a Dragon!"

Salamander started there with the two producing programs for the Dragon and BBC machines. Soon afterwards other friends joined. Lucy Parker, who studied biology and then went to art college in Brighton, and Jul Carson, who did a degree ■ experimental psychology and ended up drawing cover illustrations for the fantasy magazine *Pssst!* Between them, they do all of Salamander's packaging, insert art-work and help with the visual presentation of the programs on the screen. Chris Holland is the most recent member of the team. Fresh from driving buses for Southdown, he is Salamander's marketing and sales executive.

The final member of the six-strong partnership is Pete Ohlson who, having put up some of the money to get the venture going originally, is now pretty much a sleeping partner.

Sleeping partner

At the end of August, the Salamander partnership was formed. "Then," says Pete, "everyone else went away for four weeks holiday, leaving me at home to do the programming — a sore point!"

"The scale we envisaged was quite small — selling mail-order — I don't think any of us would have predicted it would take off as it has done," says Paul.

Lucy and Jul spent days on the phone going through the yellow pages trying to find companies ■ duplicate the tapes, make the packaging and print the box inserts. She says, "We always thought the look of the thing was very important — if you go into the shops, anything with a half-way reasonable package jumps out."

Salamander was officially launched on November ■ — with a range of six programs for the BBC and Dragon. *Tanx* was the first program they wrote, closely followed by *Dragon Rider* for the BBC. "The adverts came out too soon — we didn't understand copy dates or really know what we were doing then — and we've been panicking ever since.

"In many ways it was fortunate. It put us ahead of our competitors — I think we put out the first independent software for the Dragon."

In late November they all quit their jobs to work full-time for Salamander. That gave Pete and Paul more time to get down to programming. Says Paul: "We work as a really good programming team. He tells me what to do and I key it in!"

Designing a new game starts off with a brainstorming session. "Before Christmas," says Jul, "we all sat down and thrashed ideas about and came up with a list of 150 possible games! The problem is which ones to do."

Pete tries to plan how the program will work — how it will flow and what it will look like on the screen. It is important to match the program to the machine for which it ■ intended. "When writing on the Dragon," he says, "you have to be careful how you use sound if you want a fast game. Using the sound command hangs up the processor — if it is a long tune, then for ■ long time the computer isn't doing anything."

Salamander is also working on a range of programs for the Oric 1. "That has its idiosyncrasies too. Because of the peculiar way of using attributes to plot colours on screen, you have to be careful with the graphics — for any line or shape the first six pixels contain the Ascii attribute code and anything drawn over those pixels will not appear. Also, the Oric does not have square pixels. This creates all sorts of problems — not least that the *Circle* command on the Oric plots an oval!"

When a new game ■ planned out it is assembled in machine-code. "The actual coding is relatively simple," says Pete, "most of the work has already been done by then." The completed game is then sent out to a panel of 'play-testers' — ranging from school kids to system programmers — used by Salamander. They subject each new game to rigorous testing to make sure there are no 'hidden' bugs in the program. Then it goes for duplication.

"Now we are selling to Boots and Spectrum stores, we have had to gear our production up by a factor of 10 . . , more than once!"

Moving overseas

Now Salamander is looking ■ other markets. As the Dragon moves overseas, so will Salamander's software. The Dragon material is also being converted to run on the Tandy Color Computer for sale in the US.

A range of Oric software is now well on the way — *Trek*, *Backgammon*, a games compendium and ■ 3D maze game. A utility package is on the way for the BBC machine — featuring a machine-code disassembler, printer dump, utility and sound shape utility. A BBC version of *Golf* is also planned and material for the Lynx is being considered.

Shortly, an arcade-type game called *Star Jammer* will be released for the Dragon together with other new titles — a mountain climbing game *Everest*, a graphics package and an educational game based on Hangman.

Finally, work is now in progress on an ambitious series of Dragon programs — for launch in the summer. These are the *Castle Barron* real-time, role-playing, adventure games. The series will be in modular format with full graphics. The games will be for one or more players against (or with) the computer.

"It is a huge project," says Pete, "but something I have always wanted to do — to produce a coherent fantasy role-playing game that will work on a computer." ■

Play the game!

***Mike Grace** roams the moons of Jupiter in his latest review of Vic20 software*

As the software explosion continues and competition between the different manufacturers increases so we, the consumers, should benefit. Improvements in presentation and ideas should be matched by falling prices. With these thoughts in mind, I approached a new batch of games for the Vic20, hoping to be both surprised and stimulated by challenging and original programming.

The first tape was for the unexpanded Vic (when will it be possible to load games and other software into the Vic without this annoying problem of pulling cartridges of extra Ram in and out?) and was the terror of reviewers — a *compilation tape*. I may be alone in this, but I always feel that when several games sit on one cassette for very little money then it is unlikely any of them will be very good, and in this case I was right.

The cassette is called a *Games Pack* (hardly original) from Melbourne House and at £5.95 seems like a bargain. The best thing about this one is the cover, featuring a nice colour picture of a rocket and a brief but careful description of each game — still a feature lacking in some of the review copies I receive.

But, here the good part ends. On *Loading*, I found that the promise of the blurb on the cover was not fulfilled, for all we have are five slow and unimaginative copies of *Space Invaders, Asteroids*, etc. The *Space Invaders* is the worst I have seen, incredibly slow (and with a bug that prevented my laser from moving to the left so I had to remain at the right-hand side firing into an ever-decreasing alien horde). In fact I would prefer to avoid commenting too much on this tape as I feel it is not really worth the effort.

As a complete contrast, the next game I picked up was *Frog Runner* from Anirog Computers, again for the unexpanded Vic. This is obviously a version of *Frogger* — which, for those who are not familiar with the game, involves getting a frog safely across a main road with fast-moving traffic and then across a stream, so that he can reach home on the other side of the screen. Although points are scored, the real enjoyment of the game comes from just surviving the hazards and reaching home.

A sense of humour!

I had played the Rabbit version prior to trying this game and there were several slight variations between the two. In *Frog Runner*, once the frog has survived the traffic he has to move off the bank of the stream before a snake comes along to chomp him. Then, instead of avoiding the logs (as in *Frogger*), he has to jump from one log to the next to reach his goal. An added refinement is the random arrival of lady frogs on the logs — if you not only land on the log but also on top of the lady frog (!) then you score double points. I suspect someone at Anirog has a sense of humour and in some ways this adds to the fun of the game.

What sets *Frog Runner* up a notch or two is the care that has been taken with both the presentation and with the graphics. The frogs look like frogs and the cars and lorries on the road are extremely realistic. Another aspect is the clock, which instead of being a kind of routine timer, is a well-designed digital counter. In fact, the whole game looks as though it has been carefully designed prior to release, a feature I hope we will be seeing more of.

At £6 this game is a real bargain compared with the previous offering. My only criticism is that with my joystick I found the control a little too sensitive (in other words the frogs moved forward too easily). But I can honestly say this is one of the most addictive games I have ever played.

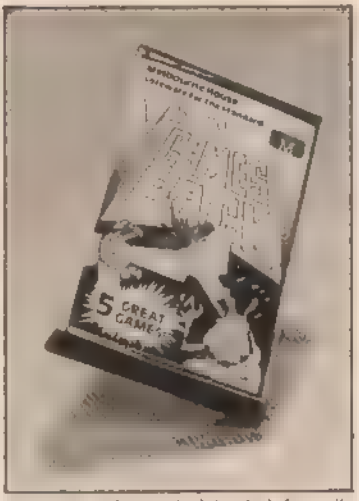
Next out of the hat was another game from Romik Software (the people who promise to release one new game a month). Some of the games I have seen in the past have been excellent while others have not been up to the mark — this latest offering, *Moons of Jupiter*, is sadly of the latter variety. It is basically *Asteroids* and is for the expanded Vic (any expansion from 3K upwards).

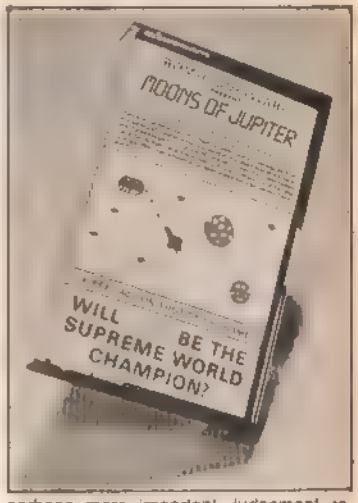
On cassette, as usual, it is loaded by the now traditional *Shift/Run Stop* combination. As often happens now, I tend to *Load* games in and walk off, leaving the tape running. With most games, when I return the first 'page' of instructions is waiting for me and I have to press a key to move the program on. With *Moons of Jupiter* though the instructions appeared silently (why not add a blip to attract my attention?) and then proceeded to carry on by themselves. Admittedly, nothing of great value is lost if you do go away and return after the program is fully *Loaded*, but you would not know that — would you?

The next problem is that the screen looks at you and does nothing once the program is *Loaded*. There is no guidance as to what to do and, while hardened players would probably do the same as I did — *Press A Key* (which thankfully works) — I suspect that if this was your first game you might well send it back saying it would not *Load*. A little more care could have avoided that.

In fact, the whole presentation is sloppy. Once you *do* get the game going you find yourself on level three. The instructions about how to switch to level one (the easiest level) are not given until you have lost the first game, when a different set of instructions appears. I found the game itself hard to play, dull, with unexciting graphics (except for the UFOs which did look good) and by the time I started playing the thing, I had lost interest because of the careless presentation. Not one of Romik's best.

Next, let's look at a couple of cartridges. The first is *Astroblitz* from Audiogenic, which is another of these games where you have to control a spaceship flying over a landscape while trying to avoid enemy missiles. As with most games of this type, the aliens are depicted in UFO-style ships (an interesting comment on our attitude to





other races perhaps) and they are extremely efficient at firing at you.

As with other Audiogenic material, the cartridge is well-packaged with adequate instructions. It can only be used with a joystick, and runs efficiently. I must confess to a dislike of this type of game (probably because I am no good and I find them boring) — but my nine-year-old son seemed to have a whale of a time and actually became quite proficient at it. I never seemed able to score anything and had my ship constantly blasted from the sky about once every five seconds. It was pretty disheartening.

Not worth the money!

I am still unsure whether a cartridge really is a better buy (standard prices from Audiogenic being around the £25 mark), because of the problem of having to switch Ram-packs around again and also because with games like *Frog Runner* around for £6, who needs to spend four times that amount? The best thing about a cartridge is the fact you do not have to sit around waiting for the cassette to *Load*, but hopefully games on discs will start to appear soon, making that chore redundant.

The other two cartridge games are *Serpentine* and *Choplifter*. The first of these is an exhausting game where you are in control of a serpent inside a maze and either chasing, or being chased by, enemy serpents (coloured red). To gain strength, you need to eat the red serpents (from the rear end only — if you meet them face to face you will be eaten). At various times frogs pop up — if you can eat them before another enemy snake does then you gain strength and length. It sounds difficult — but it isn't.

However, I found that using the joystick to move my serpent around the maze (especially as he grew in length and became more unwieldy) physically made my arms ache and detracted from its addictiveness. The game is both simple in concept and well presented — but I doubt it to be worth £25.

Choplifter is, however, something different. With very good graphics, this game involves flying a realistic helicopter into enemy territory to pick up several 'soldiers' who have been captured, then flying them back into your own territory to unload them before you are shot down by enemy tanks. This game is both original and extremely enjoyable — the little men who jump up and down to attract your attention as you fly over them were a delight to see.

Jet planes and other hazards add to the fun, and a running score of the number of men you have saved is on the screen. I liked this game a lot and, again with the proviso that being a cartridge it is expensive, I can recommend it.

What sets *Choplifter* apart is a combination of excellent graphics (the helicopter looks like a helicopter and can be flown forwards, sideways or even backwards), an original idea (no blasting aliens from the sky all the time but quite an original goal of rescuing little men), a degree of skill and, perhaps more important, judgement required (in other words you have to decide whether to leave a few men on the ground and take the ones inside the chopper back to base before a nasty jet zaps the whole lot). With added little touches like the men waving their arms at you, the delightful 'blips' as they board your rescue chopper and the fact you can win, but not too easily, and Audiogenic has a winner. To me, this game is worth the extra money and I will play it again and again if my children will let me.

So, that is another varied batch. Some originality is creeping in, but I still feel that a few games are around which are more than just a waste of money — they are an insult to the potential players. I would like to see a tightening up of some form of control on games so that an independent body could vet all software prior to release, although hopefully market forces will gradually force these poor imitations to withdraw or update their products.

Enough soapbox! The main aim of computer software should be fun! So let's hope to see some more of the standard of *Frog Runner* and *Choplifter* in the pipeline. ■

SPECTRUM 48K SPECTRUM 48K

VELNOR'S LAIR

THE MOST REALISTIC ADVENTURE YET

The Black Wizard Velnor has gone into hiding in the Goblin Labyrinth of Mt. Elk. The reason is now plainly clear, after centuries of searching he has finally discovered the ancient tomb of Grahn and is now about to realise his ghastly ambition to become a true demon on earth! Time is too short to mass an Army against Velnor. There is only one hope for mankind. That the brave adventurer may be able to penetrate Velnor's defences, defeating his guards, avoiding the traps and surprising Velnor before the metamorphosis is complete. You are that chosen person, but beware, not only does Velnor employ the most ghastly of creatures as guards, he is also a master of illusion.

In this D & D style adventure you may be a Wizard, Warrior or Priest, as a Warrior you are best suited to battle, but how will you cope with the fiendish spells of Velnor? As a Wizard your spells are devastating, but beware, your magic is limited and armed combat doesn't come easy! As a Priest you may protect yourself with the devine powers and you have no fear of the undead, but how will you handle the ghastly Trolls?

The adventure will require ingenuity and careful planning. Combat takes the form of D & D style scenarios where instant death is rare but, beware, wounds are cumulative and strategy is of the utmost importance.

The POWER of the DRAGON

BY JOHN SHARP AND DAVID BOLTON

- ★ Thirty programs of games, education, business with hints and tips on programming, plus a comprehensive guide to debugging
- ★ A wide range of programs to cater for ■ readers and to cover the full range of the Dragon's facilities
- ★ A programming style which emphasises and illustrates the power of the Dragon's Basic, without obscure and confusing programming tricks
- ★ The function of each program and the techniques that it illustrates are summarised for easy reference
- ★ Each program is listed in exactly the same 32-column format in which it appears on the TV screen, so that typing errors are easily spotted (? Ed.)
- ★ A 'Checksum' calculation can be carried out on each program to confirm that it has been properly typed in

Just £6.95 including p&p

Phone orders, cheques, POs welcome

(Diary Note: Meet the authors for free advice on Dragon problems at Watford Technical Books on Saturday, 16th April from 11 am to 5 pm — **The Dragon Clinic)**

C☆TECH SOFTWARE

ZX Spectrum Software

FROGGER AND SPECMAN

FROGGER AND SPECMAN. Two excellent games for the price of one!
SPECMAN is probably the best version of its type with great machine code graphics and sound effects with three to five ghosts, power pills and a real munchie man who munches away in all directions unlike cheaper versions!
FROGGER is a two screen superb representation of this arcade classic and has full colour Hi-Res Frogs, Cars, Roads, Logs, Turtles and Riverbank. Plus Super sound effects.
Both on one cassette for the Spectrum, price **£5.00.**

CENTIPEDE

CENTIPEDE AND PAINTER. By the time you read this our latest release for the Spectrum should be available.
CENTIPEDE is a full colour machine code arcade game where the object is to defend yourself with your Laser against a fast moving centipede which weaves in and out of the mushroom patch. There are other versions of this game but we think you'll prefer ours because we always strive for an extra dimension of realism, which makes all the difference!
PAINTER is another well loved Arcade game, here you must paint in between the numbers on a multicoloured screen before you have to overlap. Price for the Spectrum is **£5.00.**

GORFIAN

GORFIAN INVADERS. A superb four screen machine code program with Invaders, Galaxians, Firebird and Flagship. Multicoloured Hi-Resolution graphics and Sound Effects.
For the 48K Spectrum, price **£5.00.**

KRAZY KONG

KRAZY KONG. Another 100 per cent machine code program, featuring three screens of Hi-Res Gorilla, Barrels, Fireballs, Lifts and a Running and Jumping man who must rescue his girlfriend from the enraged KONG! For the Spectrum, price **£5.00.**

DRAGON

FIGHTER PILOT/ CITY BOMBER

FIGHTER PILOT is an ingenious program for the Dragon 32. It begins with a briefing session giving details of the fire attack waves and shows you pictures of the aircraft which include Messerschmidt and Junkers. You have to get the aeroplanes within your sights and shoot them down. There are five different screens including a parachuting sequence. It makes full use of Hi-Res graphics, colour and sound.
CITY BOMBER involves bombing buildings whilst your plane flies lower and lower towards them. All this for the unbelievable price of **£5.00.**

HOW AND WHERE TO GET C☆Tech Software PRODUCTS
There are three ways to get the tape that you require. Firstly you can go to one of around 50 retailers in the UK and some more overseas, there is at least one in every town and several in major cities.
Secondly you can ring our Telesales on 061-366 8223 and Alison or Shirley will take your order and tell you ■ any other games you might be interested in.
Last the most popular way is to simply clip the coupon and send it to ■ at:
C☆Tech, 184 Market Street, HYDE, CHESHIRE, SK14 1EX.

OPEN FORUM

***Open Forum* is for you to publish your programs and ideas. Take care that the listings you send in are all bug-free. Your documentation should start with a general description of the program and what it does and then give some detail of how the program is constructed. We will pay the *Program of the Week* double our new fee of £6 for each program published.**

Numbers

on Spectrum

This game that I first saw on the watch of one of my friends. Having played it a few times I realised it would be quite easy convert to a micro, in this case my Spectrum.

A row of numbers will advance resolutely from the left to the right end of a box. You must match the number in the box then fire to remove that number from the box. Should the numbers reach the right-hand end you will lose a life. You get three lives per level.

Program notes

The Graphics in line 1925 is Graphics 'A' and that in line 2005 is Graphics 'B'.

The subroutine at lines 20-50 is the keyboard scan using IN statements. From line 100-999 is the main playing loop. That from 1000-1999 is the firing subroutine. From 2000-2999 is for the game end and the subroutine from 3000-3099 changes the number in the box. Lines 5000-5999 the numbers are added into the box. Lines 6000-6020 are the holding routine, lines 7000-7050 are the instructions and 9000-9100 are variables and user defined graphics.

Variables

hsc	Highscores
sc	Score
a	Value of your number
life	Lives left
sheet	Sheets
ps	Pause shot
num	Number shot so far
level	Level

Balloons

on Spectrum

The idea of the game is to burst as many balloons as you can within the allotted time (which is random).

To burst a balloon you have to jump off the cart, burst the balloon and then return to the cart before trying to burst another balloon.

If you miss the cart then the game finishes and you can play again or you can load the next program on your tape.

If you miss or try to cheat, you will be told.

Program notes

Variables used in this program are:

- a, b. Co-ordinates of man.
- f Co-ordinates of cart.
- k Level of difficulty.
- l Length of game.
- m Movement of cart.
- s Score.
- n Stops instructions from being repeated.
- q Co-ordinates of balloon.
- v Colour of balloon.
- t Indicator of the depression of the 'P' key.
- a$ Graphic A.
- b$ Graphic B
- c$ Graphic C.
- d$ Graphic D.
- e$ Graphic E,F,G
- h$ Graphic H.
- i$ Graphic I.
- j$ Graphic J.
- u$ and w$ Type of man being printed (rising or not).

Instructions are included in the program.

To save the program *Save* 'JUMPER' *Line 1*, this will run the program automatically once loaded.

Dice

on Vic20

Dice allows you to convert your expensive Vic into a cheap set of six-sided dice! To do this the program uses data to obtain the correct dot positions and then individually prints up the dice.

From one to four can be chosen, and there are error traps on invalid inputs where appropriate, allowing the program to be used by computer novices. Sound and colour add to the appeal of this concise version.

Dice

SOFTWARE FOR DRAGON 32

1. DASH Machine Code DRAGON cartridge £18.95
A true 6809 assembler for the DRAGON computer. Assembly statements are entered in BASIC mode and can be intermixed with BASIC statements. Use BASIC for load and save and for editing source — simple and no time wasted learning new commands. A sophisticated product for a demanding task.

1. HI-RES Machine Code DRAGON cartridge £25.30
Tired of that 32 x 16 display? HI-RES *replaces* the standard DRAGON display with a full 51 character by 24 line display. Ten different character sets (including most European languages). User definable characters. Mix High Resolution graphics and text on the same screen. Return to the standard mode at any time. A must for the serious programmer and essential for business programs. *We repeat that this replaces the BASIC input/output routines – BASIC runs in 51 by 24 mode!* (Available end March.)

3. DECODE Machine Code COLOR/DRAGON cartridge £18.95
This cartridge could save you a small fortune! DECODE converts TANDY COLOR programs to DRAGON format or vice versa. Load a TANDY COLOR tape on your DRAGON, or a DRAGON tape on your TANDY COLOR, and run DECODE to convert the program into the other BASIC! (Prove it works — convert it back again!) Now all you COLOR computer owners can take advantage of all that lovely DRAGON software!

4. DEMON Machine Code Monitor COLOR/DRAGON cartridge £18.95
A complete system for entering machine code programs, as reviewed in *Popular Computing Weekly* Vol 2 No 4 — "easy to use . . . a useful tool . . . reasonably priced"

5. SPACE RACE Machine Code 16K COLOR/DRAGON cartridge £18.95 cassette £7.95
Action packed arcade game. Chase around the track destroying hordes of aliens — watch out for the mines! Uses keyboard or Joysticks. 15 skill levels, high resolution graphics, sound. Addictive!

6. C-TREK BASIC 16K COLOR/DRAGON cassette £7.95
Super space adventure game, graphics and sound, destroy the Klingons before they get you.

7. DEBERT GOLF BASIC 32K COLOR/DRAGON cassette £7.95
High resolution display and good sound effects.

8. POKER BASIC 16K COLOR/DRAGON cassette £7.95
Fast action, excellent graphics and sound, machine code assisted for speed!

9. PIRATES AHOY BASIC 32K COLOR/DRAGON cassette £7.95
An adventure game. Solve the puzzles to find all the treasure — absorbing.

ANIROG SOFTWARE

KRAZY KONG
K.B./J.S. 16K £7.90
An expanded screen presentation with rolling barrels, hammer, fireballs, lifts, handbags and umbrellas as you try to rescue the damsel Kong has abducted. Spectacular collapse of Kong's lair in the fourth screen. Uses all 21K of your expanded VIC for this 100 per cent M/C thriller, complete with high-score table.

XENO II
J.S. 16K £7.90
Gorf style 100 per cent M/C space adventure with four action-packed games. All games use expanded screens and large graphics. Fast-moving robotron, ultra fast space invaders give you the most spectacular VIC 20 game yet.

CRAWLER
J.S. Unexp £6.00
All M/C version of centipede. Homing spider, mushroom laying flea and multi-direction travel makes this game fast and furious.

CAVERN FIGHTER
K.B./J.S. Unexp £6.00
100 per cent M/C version of scramble. FOUR sectors with missile launchers, ramming ships, fuel dumps and fireballs.

FROGRUN
K.B./J.S. Unexp. £6.00
All M/C game with brilliant graphics and sound effects with features like busy highway, snakes, crocodiles and lady frogs.

SEVEN PROGRAMS (Vol. 1)
Unexp £6.00
Hi-res games for the whole family. Board game Othello plus Bomber, Slalom, Bounce out, Lunar Docker, Memory and Snake. K.B.

SEVEN PROGRAMS (Vol. 2)
Unexp. £6.00
Another Hi-res games pack for the family. Graphical Adventure, Goblins, Gold plus Dare Devil, Ghosts, Grand Prix, Breakout, Cobra and Minefield. K.B.

PHARAOH'S TOMB
K.B. 16K £6.00
A multi-screen graphical adventure. Can you avoid the traps set by the Egyptians and enter the magic triangle?

ZOK'S KINGDOM
16K £6.00
Dare you enter Zok's castle, a distant relative of Dracula. A multi-screen graphical adventure to test agility of mind and action.

DRACULA
K.B. 3K £6.00
Find Dracula before he rises and drive a stake through his heart in this multi-screen graphical adventure.

TINY TOT'S SEVEN
K.B Unexp £6.00
Super games pack for younger children with bright colour graphics and sound effects. Everybody's favourite Simon plus Super Snap, O's & X's, Word Jumble, Bomber, Duck Shoot and Mad Drivers

Trapper
by D Golds

Houdini Hamster

on Spectrum

In this game for the 16K Spectrum you must guide HH from his cage to the cheese. Blocking him are impassable fences. When you have mastered this try guiding him from his cage to the cheese to his cage again and then back to the cheese.

Bar Graph

on Vic20

This program for the unexpanded Vic20 enables you to display your data in the form of a bar graph. The screen display is calculated according to the scale. The scale must be from 0 to ■ number bigger than 1.

After typing in the data and selecting the colours the screen will go blank for a few seconds. This is because the columns of the graph are being poked into screen memory, and it is only after this has been done that the colour is added.

Variables used

A% Used to see whether or not you want instructions and later to hold the title string.
B$ Used to delay the program until you hit a key.
S% Height of scale
CN Number of columns.
D Used to control the loop to enter the figures and to control the loop ■ draw columns on screen and again to display figures after displaying the graph.
U Number of first colour chosen.
E Number of second colour chosen
K Used to control loop to draw horizontal axes.
S Used to control loop to draw vertical axes.
J Used to control loop to draw individual columns.
K Screen code for a reversed space.
T Used to control loop to add first colour chosen to alternate columns on screen.
C As T but does second colour and remaining columns.
S1%, S2%, S3% Used to find fractions of S% to put on scale.
J$ See B$.
Z$ Used to choose option from menu.
V$ Used to decide whether or not to change figures and again to decide whether or not to display graph again.
W$ Used to decide whether or not to change colours

Arrays used

D% Used to store the heights of the columns after they have been scaled.
DK% Used to store the heights of the columns as they were typed in so they can be displayed later.

Program notes

Lines

10 to 32 Title screen.
34 Checks whether or not you want instructions.
40 to 65 Instructions.
90 Clears screen and changes to upper case.
150 to 170 Pokes horizontal axes into screen memory
190 to 210 Pokes vertical axes into screen memory.
250 to 310 The most important bit. Uses two loops; one ■ control the starting point ■ the column and the other to poke a reversed space from there to the finishing point of the column in a vertical line.
330 to 350 Gets you to move the program on.
360 Goes to menu for options.
420 to 450 Prints figures in two columns on screen.
460 to 474 Asks you whether you want to change figures and takes appropriate action.
476 Sends you back to input new figures.
500 Set up arrays for the figures you type in and for the figures after they have been calculated.
505 to 507 Asks you for title and checks its length
510 to 540 Asks you for number of columns and their heights.
550 to 565 Pokes first colour onto alternate columns of graph.
570 to 590 Pokes second colour onto other columns
592 to 598 Adds scale along left-hand side of screen
610 to 630 Asks whether you want graph displayed again after displaying figures and takes appropriate action
640 Sends you to main menu.
650 to 690 Asks you if you want to change colours and takes appropriate action.
710 to 780 Asks you which colours you want for the graph.
800 to 870 Main menu
880 to 949 Goes ■ correct section following your selection.
950 Calculates variables for scale.

To those of you with Vic printers

By changing two lines and inserting a few more you can have the option of having a crisp clean copy of your graph on paper. All you have to do is:

Change line 600 to 'Goto 315'.
Change the '5' in line 670 to '6'

Insert the following lines:

```
286 ifz$ < "5"orz$ > "5"then288
287 id=2 = int(d/2)#henk = 102
315 ifz$ = "5"thengosub6010

Clock

on ZX81

This machine code program will simulate a clock.

Careful adjusting of the delay can make it accurate ■ one tenth of a second.

Entering the program

Firstly enter line 1 which will contain any 10 characters. Now enter line 2 which will consist of 132 characters.

Enter the hex loader and type in all the hex codes, either individually or in blocks. When finished, if you are correct 0:60 should be at the bottom of the screen. Line 2 should now be as above.

After typing the accompanying basic all should work. Once run the string prompt will appear. Enter the time that the clock should start at in this form:

hours, minutes, seconds, tenth seconds.

Press N/L again to start the clock. Any key pressed thereafter will halt the program with 5/180.

To change the delay:

poke 16565 with least significant byte (usually 100)
poke 16566 with most significant byte (usually 13)

Tony Bridge's Adventure Corner

Help!

"It's more than a game, it's an institution . . ." So said Thomas Hughes, the novelist. He was talking of a quiet, sedate game that is nowadays played by Australians wearing pink, but he might equally have meant a later 20th-century phenomenon, Adventure.

Some of your letters have asked for the basic guidelines to Adventuring on computers, so I thought that we should have a rest from looking at all the myriad adventure programs, and concentrate instead on the history and theory of the genre. The first thing to bear in mind is that this is just about the most frustrating thing that you can do on your computer — I hope so, any way!

Last week, I mentioned Tracy Kidder's book, *Soul of a New Machine*. In addition to being a primer on the computer industry, and an insight into the commercial world of computer design, the book also contains some absorbing inside information on the beginnings of adventure.

Imagine a futuristic-looking complex of low-rise buildings sometime in the late sixties or early seventies. The main purpose of these buildings is the design and manufacture of computers. For long, long, hours throughout the day, young whizzkids slave over hot terminals and huddle together in corners, talking in a language that is largely — to you and me — incomprehensible. The conversation is of Nand gates, microcode and microverbs, *locs* and *Pals*.

Eventually, however, even these dedicated computer-builders tire — the lights are gradually switched off, until isolated pools are left. Long after the rest have gone home, one or two *Midnight Programmers* are left staring at the VDUs. These are the pioneer adventurers that have bequeathed to us this frustrating pastime.

Next week, I will delve further into the delights to be found in Adventure.

I have received several pleas of *help* in the post. Many of the letters concern *The Hobbit*, as only befits a game that is certain to become one of the classics for the Spectrum. But, a lot of you seem to be stuck on one or another of Artic's programs.

Alastair Davie of Bromley and M Chan of St Mawes (one of my favourite places in England) are both in trouble on the *Planet of Death*, while poor old Stephen Perchard, usually of Bracknell but now stuck on *Espionage Island*, is having terrible trouble there. Dosha Haynes of Melton Mowbray is having problems on the *Ship of Doom*.

Well, if it is any consolation, you are not alone! Artic's adventures are among the most annoying and frustrating of those available for the Sinclair machines. However, Artic tell me that they have *help* sheets available for those who are really stuck. Write to Artic at: 396 James Reckitt Avenue, Hull, North Humberside.

Incidentally, as a more general point, most companies producing adventures have *help* sheets of their own. It is certainly worth writing to the relevant company and asking for advice.

I will be answering some more of your interesting letters next week, with some specific clues for those who are stuck — in the meantime, *let sleeping Uruk-hais lie!*

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further, write to: Tony Bridge, Adventure Corner, *Popular Computing Weekly*, Hobhouse Court, 19 Whitcomb Street, London WC2 7HF.

Comedy

on ZX81

What's this? An original program for the ZX81? Impossible? NO! The following program is guaranteed NOT to be Space Invaders, Pac-Man, Breakout, Fruit Machine, or anything similar!

There is an undefined variable at the end of line 14. This is quite deliberate.

```
1  REM "ZX81 HUMOUR"
2  PRINT " Q) WHAT IS THIS?"
3  PAUSE VAL "99"
4  FOR A = CODE " " + " TO SIN PI STEP - SGN
5  GOSUB CODE "7"
6  CLS
7  NEXT A
8  FOR A = SIN PI TO CODE " " + "
9  GOSUB CODE "7"
10 IF A = CODE " " + " THEN GOTO CODE "$"
11 CLS
12 NEXT A
13 PAUSE VAL "300"
14 PRINT AT VAL "18", VAL "15"; "OF"; AT VAL
   "17", VAL "5"; "A) THE "; CHR$ VAL "55"; CHR$
   VAL "48"; CHR$ VAL "56"; CHR$ VAL "  "; "
   AND "; CHR$ VAL "43"; CHR$ VAL "38"; CHR$
   VAL "49"; CHR$ VAL "49"; Z
15 PRINT AT A, VAL "12"; CHR$ VAL "46"; CHR$
   VAL "41"; CHR$ VAL "46"; CHR$ VAL "9"; CHR$
   VAL "38"; CHR$ VAL "59"; CHR$ VAL "46";
   CHR$ VAL "51"
16 FOR B = SGN  TO VAL "3"
17 NEXT B
   RETURN
```

The *And* in line 14 is a keyword. The *For — Next* loop in lines 16 and 17 is used as a time delay. If you use *Pause*, the screen will flicker.

Cruising Challenge

£10 to be won

Can you beat the new high score?

First there was *Space Invaders*, then there was *Pacman* — now there is *Cruising*. This all-action, machine code arcade type game, will test your powers of co-ordination to the limit. Never before has a game asked you to think so quickly, or move so fast!

Achieving a high score on *Cruising* takes considerable skill, and not a little practice. Getting through the first four levels is not easy, and that's just the beginning.

Now you can make that skill work for you. *Popular Computing Weekly* is offering £10 each month to the player with the highest score on *Cruising*. All you have to do to enter this month's competition is send a print-out of your highest score, together with your name and address, to:

Popular Computing Weekly
Cruising Challenge
Hobhouse Court
19 Whitcomb Street
London WC2 7HF

Each month we will publish the name of the winner and the new *Cruising* high score. Are you good enough to accept the Cruising Challenge?

The winner of last month's competition with a score of 9012 was N Darlow of Langleigh Road, Ilfracombe, Devon, who receives £10. Entries for this month's competition close on April 30.

Notes

1) Each entry must consist of a ZX printout and your name and address.
2) Closing date for this month's *Cruising Challenge* entries is April 30.
3) The highest score each month will receive £10.
4) High scores cannot be transferred from one month to another.
5) The judges' decision is final.
6) No employees of Sunshine Publications Ltd, or their families, will be eligible to enter the *Cruising Challenge*.
7) *Cruising on Broadway* for the 16K and 48K ZX Spectrum is available through W H Smith and leading computer stores for just £4.95. It is also available mail-order from Sunshine Books Ltd, Hobhouse Court, 19 Whitcomb Street, London WC2 7HF.

SPECTROGRAPHICS

for ZX Spectrum (48K)
price £6.90 including Manual

Enables you to exploit the Spectrum's superb graphics potential to the full. Eleven graphics procedures in a single user-friendly program. Hi-res and lo-res sketchpads, eight sizes of text, a mini-text editor, colour WASH and PAINT, etc. Create your own UDG characters in a 4 × 2 array. SAVE your display on tape or PRINT on ZX Printer. ReLOAD displays for editing or updating. Etc. etc!

BUSINESSMEN – *use SPECTROGRAPHICS to prepare point-of-sale adverts.*
TEACHERS – *prepare lesson illustrations at home to show your pupils at school.*
GAMES ENTHUSIASTS – *design invaders, monsters, backgrounds etc. to LOAD into your latest game.*
GRAPHIC ARTISTS – *turn your Spectrum into a colour graphic sketchpad.*
EVERYONE – *have fun with SPECTROGRAPHICS!*

Send s.a.e. for further details.
From leading computer stores or by mail order.
Prices all-inclusive. Full money-back guarantee.

THE DRAGON DUNGEON

TAKE INVENTORY

The Dungeon vaults are filled with peripherals, software, books and other goodies exclusively for the Dragon 32 owner — from cassette recorder leads to editor assembler — from arcade games to Database Management Systems.

Our stock of software is selective, rather than extensive, since we believe in value for money. Feed your Dragon on the best programs!

Best selling game Salamander's "Dragon Trek" £9.95.

Best selling book "The Dragon Companion" £4.95. Still in stock "The Working Dragon 32" £5.95.

We now have the widest selection of Dragon Software available in the UK (games, education, business and utilities). Send for catalogue.

DRAGON OWNERS CLUB

The Dragon Dungeon Club monthly newsletter, *Dragon's Teeth*, is packed with news, reviews and information for the dedicated Dragon-basher. The March issue of *Dragon's Teeth*, now out, includes both hardware and software offers and Club Members registering before March 31 will be eligible to purchase Dragon badges and sweatshirts at very special prices.

Annual membership, including *Dragon's Teeth*, £6 (six-month trial subscription £3.25).

Hang It!

***Robert Turner** presents Hangman – an educational game for younger children*

This is the standard game of Hangman. The program takes up only 2½K of memory but as it uses Mode 2 graphics with 8 colours it will not run on a Model A.

At the start, you are asked whether you want to play a one or two player game. If your choice is the latter, one person has to type in his word while his opponent is not looking. The program will then proceed as normal.

For the one-player game, the words are contained in *Data* statements from line 660 onwards. In this version all the words are animals, although you can type in any words you wish. One point to bear in mind though, is that if you have more than 90 words in the program, line 160 has to be changed to suit.

As an added attraction, the man's face turns blue at the end if you have lost.

NB: Did you know that the whole of the BBC's character set can be redefined using the normal *Vdu 23* command. This only works in the modes 0 to 6. If you press the *Break* key, however, and then change mode, the new characters will disappear.

Notes

10	Create array for letters in word
30	Initialise variables
40-70	Determine number of players
80-130	Define characters for man
140	Turn cursor off
150	Choose a random word
180-210	Draw border around screen
220-280	Print dashes and put each letter into array
290-390	Input letter and determine whether letter is correct
400-430	End of game round up if person has won
440-450	Make a beep and print letter in correct position
460-590	Draw gallows and man
600-650	End of game round up if person has lost
660-740	DATA containing words

A whole new horizon

***Malcolm Davison** shows that the Spectrum's visual vocabulary is larger than you might think*

Early impressions of the Spectrum character set may lead one to think that its visual vocabulary is not large. The following program (which you will find in Chapter 14 of the Spectrum Manual) prints out the entire Spectrum character set.

The scope is widened when you make use of the user-defined graphics. However, it is the statement *Over* that opens up a whole new horizon — instantly giving access to more than 30,000 characters.

The combination of two or more characters overprinted on the same print position gives a result that is not what one might expect (see illustration). The ground rules are as follows — where *Ink* lands on *Ink* the result is *Paper*. *Paper* plus *Paper* gives *Paper* and *Paper* plus *Ink* gives *Ink*. Now let's see what actually happens in practice.

The program *Overlay* selects two characters at random with codes between 33 and 143, and then overprints them. If you would like to see all the combinations, you could logically step through them all using a pair of *For .... Next* loops, but that would give you over 13,000 screens of information — and if you wanted to print them out, a few rolls of paper, too! Incidentally, if you would like to print out each screen — add 283 *Copy*.

It will be quickly apparent that the majority of characters created are unlikely to be of use to man or beast — but there are many combinations that may be useful in games programs or for building up designs. Using the program *Overlay2* try a few of the combinations below:

```
% #  spaceship?
* >  plane?
  c 0  bullet?
inv ©  4  insect?
* |  flame at the base of a rocket?
  O ¡  head of a Martian?
  A ↑  lunar landing module?
```

Perhaps my suggestions of their appearance are a bit far-fetched, but in the context of the program might be readily accepted. Where character combinations have a matching 'mirror image' about the *x* and *y* axes, attractive borders can be created (see the examples). Try also:

%■, !.■#.■-.■<

I hope these ideas will be helpful; if you make use of your own user-defined graphics, the combinations are literally endless. I shall be interested to see how other programmers make use of this intriguing statement.

Now, for the really intrepid explorer, why not try overprinting three or more character? Best of luck! (If you want a foretaste of this try leaving out *Cls* in line 550 of *Overlay2*). ■

SOFTWARE MARKETING
HOME COMPUTERS

Combine your interest in software and your marketing expertise

Atari International (UK) Inc. is part of Warner Communications and a major name in the field of home computers. Due to our continued success in this expanding field, we are now looking for a young man or woman who can combine an interest in personal computers with an expertise in marketing.

Reporting to the Product Marketing Manager, and working in close liaison with our software development team, you will manage our range of software on a day-to-day basis as well as anticipating and identifying opportunities for further growth. You will be involved with the promotion and merchandising of software and manage our aggressive new product programme.

Possibly from a retailing or consumer goods background, you must have a keen understanding of the commercial aspects of marketing. At the same time, you should have some understanding of home computer software (which you may have gained as a hobbyist).

In addition to the salary quoted, we offer a generous benefits package. Career prospects within our progressive company are first class.

Please write with full details to:

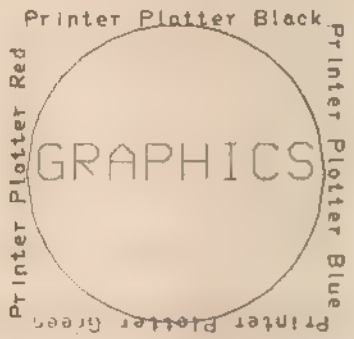
Colour combination . . .

Dan Smith explains how to use a Tandy CGP-115 printer with the BBC model B

The new Tandy CGP-115 four-colour graphics printer is an attractive proposition, at about £100 less than a cheap dot-matrix machine. The paper-width of 4½ inches is adequate for home use, but the use of special ball-pens in place of the more usual impact pins may prove more expensive. Against this, the Tandy "writes" in four colours, *and* gives true descenders on letters like g, j, p, y, etc.

The CGP-115 operation manual naturally only covers use with Tandy computers, but the commands are easily adapted for operation with the BBC Model B with a parallel cable. The following program shows how text and graphics modes of printing may be used with the BBC microcomputer.



Notes

Line(s)	
10 & 20	Clear the screen and display the program name 'Plotter'.
40	Tells the computer to send printer output to the parallel port (for serial output, you should type *FX5,2).
50	Turns on the printer.
70	Puts the printer into Graphics Mode (VDU 1,18) and then moves the pen 100 units of 0.2mm each across the paper.
90, 120	
150, 180	Determine the printing direction by "*Q*" commands.
110, 140	
170, 190	Decide the pen colour to be used, the "*C*" commands.
200	Puts the printer back into Text Mode for the next 3 lines, in order to move the paper up by 5 text lines.
240	Sets the printer back into Graphics Mode, and the "S4" command determines the size of letters (16 characters per line) in the word *Graphics* to be printed at line 260.
250	Changes colour again (to blue from red).
260	The "*R*" command moves the pen relatively, 10 spaces.
290-360	Draw the circle with a radius of 125 units (of 0.2mm each).
370	Reduces text size back to normal 40 characters per line.
380	Returns the colour to black.
390	The '*A*' command puts the printer back into Text Mode.
400-420	Move the paper up by 10 text lines.
430	VDU3 turns off the printer. ■

Business — Mailing List £15.00, Payroll £25.00, Stock Control £15.00, Home Finance £7.00, Tax Calculator £4.00. Many more programs available SAE for details

ABACUS — ABACUS SOFTWARE

ZX81, SPECTRUM, DRAGON BBC AND VIC
SOFTWARE LENDING LIBRARY

We have for hire from **50p** (including postage) programmes for your computer.

£5 for life membership (less than the cost of a single game) brings you the Software Lending Library membership kit including catalogue, news letter and free hire of 1st programme/game.
All tapes lent with full manufacturers permission.

Send ■ cheque or postal order for **£5** to **Software Lending Library**, PO Box 3, Castleford, West Yorks stating name, address, and computer type.

BOND SYSTEMS

TOUCH TYPING with a new, simple finger position system gives "peek and peck" programmers new speed and accuracy. Your computer can type up to 100 words per minute with this course! Can you? DRAGON keyboard is ideal for this course. SPECTRUM has non-standard positions for space-bar and ":", but otherwise ideal.

VOCAB FRENCH and **VOCAB GERMAN** present ■ 700 word vocabulary of your most needed words straight into your "memory".

Write to BOND SYSTEMS, stating DRAGON or SPECTRUM and PROGRAM NAME, with £5.00 for each program.

15 BELMONT ROAD, HARROGATE,
NORTH YORKSHIRE, HG2 0LR

Plotting a course . . .

***Richard Dodd** presents a graph plotting routine for the Dragon 32.*

This line graph program enables you to enter a maximum of 235 values. The computer will then print the highest value, the lowest value and the average. Then the values will be scaled down, if necessary.

Next, the computer will scale and draw the two axis. Then the points will be plotted and joined up. Lastly, the average line will be drawn in.

Notes

50-90	Prints instructions
100-170	Inputs points
180-200	Scales down the values if necessary
285-365	Calculates the highest, lowest and average and prints them
380-395	Reverses numbers
400-430	Stops before drawing
450-510	Draws and scales values.
520-630	Draws graph
640-660	Draws average.
670-680	Freezes picture

Variables

P	Number of points
B	Each point
A	FOR NEXT loop
S	Scale
C	FOR NEXT loop
T	Title
D	Position of title
LOW	Lowest number
F	FOR NEXT loop
HIGH	Highest number
AVERAGE	Average

PEEK & POKE

COMMAND CLASS

A N Berry of Greenfields Drive, Little Neston, South Wirrall, writes:

Q I have recently been *Peeking* around the Rom of my Spectrum looking for useful routines. Most of the command routine addresses are stored in the command class table. Useful ones that can be called directly by machine code are: *Cat . . . 6035 Stop . . . 7406 New . . . 4535 Continue . . . 7775 Cls . . . 7971 Return . . . 7971 Copy . . . 3756.*

But, the ones I am most interested in, the *Save* and *Load* routines, are not in this command class table. Can you help me with the start address of these routines?

A The *Save* and *Load* routines are at 0605 and the locations of the address are stored at 1ADF and 1AD0. A book that you will find very useful is Ian Logan's *Dis-assembling your ZX Spectrum Rom*, published by Melbourne House.

WILL IT WORK?

R Machachlan of Craig Road, Workington, Cumbria, writes:

Q I have a ZX Spectrum on order, but unfortunately I only have a Philips N2213 cassette recorder on which to *Save* and *Load* programs. This recorder only has a din socket, so I was wondering if I could use an adaptor to make it work on my Spectrum, with its *Ear* and *Mic* jacks.

Also, I would like to know if any *Scramble* or *Defender* type games are going to be available for the 16K Spectrum?

A In short, the answer to your first question is no. A din plug such as that on the N2213 expects about 300 millivolts in and out. The Spectrum needs 4 to 6 volts in, but only puts about 10 millivolts out. I am afraid that you will need to get a cassette player that has Jack sockets. Both Ferguson and Sanyo do a model that has both.

In answer to your second question, try *Ground Attack* or *Orbiter* from Silversoft.

SOFTWARE CHALLENGE

A Marsh of Monmouth Road, London N12, writes:

Q I have just bought a Commodore 64, after borrowing a Vic20 for a couple of weeks. I would like to know whether or not a tool kit is yet available for the 64, as I am more interested in the challenge of writing software than buying it. If not, do you know when and if one will be available? Also, could you give me the relevant addresses and prices?

A I know of only one tool kit for the Commodore 64 so far, though it is early days yet. It is produced by DAMS Business Computers, Gores Road, Kirby Industrial Estate, Kirby, Liverpool L33 7UA. It is called *Vic-Aid*, though a Commodore 64 version is available. The total price, including VAT, is £22.94. However, it needs to be used in conjunction with the DAMS *Ram n Rom* board which costs a further £26.39.

IN DESPERATION

E Gerrard of St Hubert's Close, Gerrards Cross, Bucks SL9, writes:

Q I am the proud possessor of a Commodore 64, but am desperate for software. I understand that part of the software support program will consist of Rom (Plug in) cartridges and I am anxious to know the following:

(a) When are they likely to be available in the UK?

(b) Are the cartridges currently available in the United States? If yes, are they compatible with the UK machine?

It has been suggested to me that cartridges designed for the American 110-volt system would not be compatible with the UK 240-volt system. If the answer to this is also yes, do you know where I could get a list of items available in America?

A The answer to your first question might well depend on who you ask. Commodore told me that the first of its cartridges were already with the dealers — however, they might well be filling back orders and so will not have any in stock. This is news to Deans and Maplin in Hammersmith, who have yet to see the machine, let alone the cartridges.

The only shop with Commodore 64 cartridges (that I know of) is the Vic Centre. By the time you read this, it should have close to a dozen titles in total, about half of which will be cartridges, from Kobra Micro Marketing. The titles are, *Diary 64* (a form of database), *Forth*, *Stat* (statistics) and *Graf* (grnph). There should also be an up-rated form of *Visi-calc*, that is both cartridge and disc.

Although the Vic Centre does not know when it is going to be getting Commodore cartridges, Commodore is talking about having a wide range of material available by May.

STRANGE PROBLEM

Mark Anders of Eaglesham Road, Newton Mearns, Glasgow G77, writes:

Q Strange things are happening to my ZX81. It is difficult to explain exactly what is wrong, as one day the fault might be present, but on another day it might not. It is all to do with Basic, as my machine code runs perfectly. My 16K Ram pack is not the cause, but it is definitely one of the chips on the ZX circuit board. Which one?

I do not want to send it back to Sinclair because:

(a) The time they take.

(b) The guarantee has expired.

(c) Anyway, they would not recognise the problem.

Is there a chip responsible for the faint lines I get on the screen? Is there a cheaper way of replacing chips, other than by buying a new ZX81? I hope you can help me with these questions.

A I can see why you do not want to send your ZX81 back.

There could be one of two related reasons for your problems. The machine could be overheating, in which case a larger heatsink might well be the answer. In practice, this usually comprises a piece of copper plate firmly bolted to the existing heat sink. I have seen one made of 20-gauge copper plate that runs the entire length of the keyboard (in this case the keyboard is missing and another keyboard has been added).

Another solution to this problem is to wire a 2.7 ohms resistor into the power line, to take up some of the excess power being put in.

● Postern has written to me (*Peek & poke*, March 17-23), asking me to point out that it is not a cassette duplicating company, it is a software distribution and publishing company. The company used for duplication is Kiltdale Ltd, and any further approaches should be made directly to Kiltdale Ltd, Liddington Trading Estate, Old Station Drive, Leckhampton, Cheltenham.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem *Peek* it to Ian Beardsmore and every week he will *Poke* back as many answers as he can. The address is *Peek & Poke, PCW*, Hobhouse Court, 19 Whitcomb Street, London WC2 7HF.

Ziggurat

Above board?

As an interested observer of the software scene, I have noticed two major changes in the way in which software is being sold, or not sold.

Both these developments are illuminating examples of initiatives which, I feel, will have a long term adverse affect on the provision of software.

The first change is the proliferation of software libraries. Though many, we are told, are honest and upright (and pay royalties for the use of the programs to the owner/author of the program) *some* are not. Given my estimation of human nature, most will not be so above board.

There is an obvious parallel with video libraries: I was sitting on the bus one day (going to work) when I noticed that the person next to me on the seat had a video of *ET* — obviously bootleg.

Some software libraries might contend that they were only performing the same function as the lending libraries for books; after all, books are (in a sense) even more "copyrightable" than programs. This is true, but even with ordinary libraries authors have managed to establish a "public lending right", and get fees based on how often their books are taken out of selected public libraries. How is one able to establish a public lending right for programs, with all the very small (unknown and unofficial) lending libraries?

I want to rename the lending libraries, "copying" libraries, because that is what they are in most cases. The owners of the copying library may have rules which forbid copying — but it is a strong willed library member who holds back from copying.

It has taken a while for some user groups, well-known beds of copying, to realise that it is not clever to borrow some software from a dealer, and then copy it wholesale — dealers are not stupid, and do not let this carry on for long.

The strategies software writers will have to use will raise the price of software (already far too high in some cases) further upwards, and programs will each have an individualised number, with some protection against tampering.

The inevitable result will be that ultimately the user will find less software available and will have to start writing — people will play *their own* games.

The second development is those firms which offer to buy your programs, and then sell them on a royalty basis. At one time, the standard way for programs to be sold was for a person to call him/herself something like *Stratospheric Software*, make immense claims about the zoominess, wanginess, and kerputiness, of its programs and offer to send them to you within 28 days, quite often the cheque being banked weeks before your programs arrived.

Reading a report of one such young entrepreneur, I was struck by the general feeling of amateurism. Fine, but I am not sure whether I would be happy to trust my affairs (or programs) to such a person. Again, all such firms are different, and it is impossible to generalise. Think, though, why so many people want your programs, and think, then, that many of those programs will have been written by people such as yourself.

James Thurber wrote that "It is better to know some of the questions than all of the answers." ■

Boris Allan

Puzzle

A fishy problem

Puzzle No 50

As an end-of-day treat, all the stars of the Winterland Dolphinarium were given sprats for tea by their head trainer, one Archibald Aqualung.

All the dolphins were given the same number of fish but, when the porpoises came to receive theirs, Archy realised that he would not have enough to go round. So he had to give each porpoise four fewer sprats than he had given each dolphin.

In all he gave out four gross of fish. How many porpoises were there if the total number of animals fed was 31?

Solution to Puzzle No 45

As we are limited to 11 digits, the answer must lie between 47 and 99 — ie, numbers with a 4-digit square and 6-digit cube.

These are entered into string A$ and checked for duplication of digits.

```
 10 FOR N = 47 TO 99
 20 LET B$ = STR$ ( N * N)
 30 LET C$ = STR$ (N * N * N)
 40 LET A$ = B$ + C$
 50 FOR M = 1TO 9
 60 FOR L = M + 1 TO 10
 70 IF A$(M) = A$(L) THEN GOTO 110
 80 NEXT L
 90 NEXT M
100 PRINT "THE ANSWER =";N;" SQUARE =
    ";N*N;" CUBE =";N*N*N
110 NEXT N
```

This gives the answer of 69 and the discs are arranged 4 7 6 1 (= 69¼) and 3 2 8 5 0 9 (= 69⅜)

Winner of Puzzle No 45

The winner of Puzzle No 45 is: Andrew McFadyean, Bradford Road, Birstall, West Yorks, who receives £10.
